White River & Irving Peak Fires
September 6, 2022
The Irving Peak Fire saw little growth over the last two days.
The fire has been most active on the eastern flank within the Ninemile Creek drainage with crews reporting mostly creeping, smoldering and backing.
Irving Peak
White River
Firefighters completed preparations along containment lines and will monitor fire behavior and growth utilizing ground and aerial resources.
A cold front exited the area yesterday and brought slightly warmer temperatures and breezy winds out of the northwest. These conditions caused interior burning and smoke throughout the fire.
The southeast corner continues to be the most active with the fire showing minimal growth. Firefighters are backhauling excess equipment and continuing to monitor spread.
